

The Löddeköpinge Investigation V

**Report on the anthropometrics
of the skeletons from the early
medieval cemetery in
Löddeköpinge (Scania, S. Sweden).**

**by
P.O. Persson and E. Persson**

The investigation includes 1431 graves, 121 of which did not contain identifiable skeletal material. The latter were tentatively aged in accordance with the length of the graves, i.e. the observable contour-lines of these.

In table 1 the sex and age determination of the individual skeletons are shown along with the stature of the living person. The determinations are based upon characteristics and indications described in several standard anthropological and osteological works (e.g. Martin and Saller, 1957; Gejvall, 1960 and Brothwell, 1981). Besides, they are based upon a comprehensive osteo-anthropological experience.

Skeletons grouped within the age interval »20–100« are those of clearly adult individuals in which, because of a poor state of preservation, no further age indications can be seen. In many of these skeletons the sex determination is also uncertain, which may be a partial explanation for the male dominance in the group mentioned.

The statures were calculated using formulae derived by Trotter and Gleser (1952 and 1958) and given by Holk (1970).

In comparatively few skeletons (about 40) the fibulae were so well preserved that they could be measured with acceptable accuracy. The figures are included in the calculations for the stature estimation of the individuals in question, but were erroneously omitted in the tables.

On reasonably preserved crania certain measurements were taken and corresponding indices and angles calculated. The methods for the measuring and the definition of the measures, angles and indices are the ones given by Martin and Saller (1957). Table 2 and 3 show the craniometrics. The actual measurements and indices (numbered in accordance with Martin and Saller, 1957) are: M1, M5, M8, M9, M10, M17, M23, M40, M45, M47, M48, M54, M55, M65, M66, M72, and M79; and I1, I2, I3, I12, I13, I38, I39, I48, I164. — Table 2 gives the neurocranial measurements and indices and table 3 the facial measurements and indices.

The present paper is only a compilation of the raw anthropometric facts of the Löddeköpinge skeletal population. Works concerning its demography and archaeology, the presence of certain »discrete traits«, pathological and traumatic cases etc. are in preparation.

ACKNOWLEDGEMENTS

The figures have been extracted from a data-base and the tables designed by Dr. Boldsen assisted by stud. scient. Erik Bertelsen, RECAU.
